

## THE GARDEN AND WORLD PROJECT

Thank you for buying this pak, it is a complete and lush world building setup with preset scenes and is also compatible with 3Delight and Iray in Daz Studio 4+

### **This Pak Includes:**

- 01 Landscape scene
- 01 Setup Scene
- 02 Portrait Scenes
- 06 Fully laid out Scenes ready to go

### PLUS

42 Different Scene Items to create endless Scenes of your own creation. Includes Bushes, Grass, Flowers, Plants, Trees, Landscapes, Bridge, Barrels, Stone Path, Rock Garden, Posts, Pool and Vines, Stones and Vines and more.

12 Sundial Setups [Iray only] that control the physical Sun for ultra realistic world simulation.

- 03 HD Environment Skies

### **Iray Scenes**

I find everything always looks better in Iray mainly because of reflections shadows and many other things that can give a render that extra touch of realism.

The preset Scenes in the folder "2\_Garden Scenes" already have lighting set up for you via the Iray Physical engine.

If you want to change the suns position then simply go to the "3\_Sundial [Iray]" folder, select the Sun Dial in your scene and and hit one of the presets to move the suns position.

Lastly if you are using a camera you created, experiment by turning the cameras lamp from auto to off, sometimes this yields a better result.

### **3Delight**

Sometimes if your card does not have enough Cuda Cores for Iray then it can be easier to use 3Delight.

So in this situation you can't use the Sundial.

There is included a file at the bottom that is called "The Distant Lights [3Delight]" simply add this to your scene.

Or you can use one of the many lighting sets that are available for 3Delight environmental lighting.

Also make sure you switch the render engine from Iray to 3Delight, and you are good to go.

THE GARDEN AND WORLD PROJECT is easy to use it does not really require any comprehensive user guide, simply install and open Daz Studio, add a scene or create your own scene by adding the landscape and objects from the "1\_Garden Objects" folder, then set up and position the sun from the "3\_Sundial [Iray]" folder and you are good to go.

Happy Rendering
